2011 CHIRP Data Report
Clients by Level of Care Coordination and Racial Group
October 2009 - September 2010

The table on the next tab shows the ages and care coordination levels for all HCP clients entered into HCP CHIRP in the federal contract year ending September 2010. This table shows the seven primary racial groups or unspecified race for all HCP clients receiving care coordination services in the contract year.

These data only reflect the population of CSHCN served by HCP local offices and are not directly comparable to other data sources, including state and national surveys. You may make such comparisons as long as you understand the limitations of doing so. National and state surveys use a randomly selected sample that is statistically representative of the CSHCN population as a whole for the geographic area included in the study. The data included here are from information entered by HCP local offices about the actual families and children in Colorado with whom they connected at any time during the specified period

HCP designates a level from I to III for care coordination using the following criteria:

Level I -

- Phone log entry

OR

- HCP Program Screen without Effective Date (Used for notifications from CRCSN and NBH).

Level II -

- HCP Program Screen with an Effective date
- Communications and Referrals documented

Level III -

- HCP Program Screen with an Effective date
- Communications and Referrals documented
- Active Care Plan documented

NOTE: *If a record does not have a HCP Program Screen or there isn't an Effective Date, it is always considered Level I Care Coordination.*
